Bidding
Construction Administration

Foit-Albert investigated adding three bays onto the existing four-bay, pre-engineered metal building, located in the Town of Colonie maintenance yard. We examined the impact on the surrounding site and balance the new space with the existing site to develop the most cost-effective solution.

The highway purchasing garage portion of this project will involve alterations to the carpenter shop. Foit-Albert provided interior renovations of existing space for use as a carpentry shop.

Foit-Albert developed three (3) alternatives including a recommended alternative for review. After a decision was reached, we developed final plans, specifications, and estimates. We answered contractor's questions during bidding and provide construction administration during construction.
