

Reconstruction of Page Green Road

Cortland County Highway Development
Town of Virgil, New York

Services Provided

- Surveying
- Civil Engineering
- Environmental Engineering
- Bidding Support
- Public Information Meeting
- Support
- Construction Inspection

This locally-administered, federally-funded project is the third phase of the reconstruction of Page Green Road (County Route 122) in the Town of Virgil in Cortland County. The existing 1.8 mile segment of roadway has narrow shoulders, poor drainage, and pavement deterioration. The project includes providing survey, right-of-way-mapping, acquisitions and incidentals, environmental review, traffic analysis, design phases I-VI, and bidding and construction support.

This project involved the reconstruction of CR 122 to meet current standards for safety and structure. The pavement will be widened to accommodate proper lane widths, shoulders, and turning lanes, if required. Drainage and culverts, utilities, signage, guide rail and adjacent landscaping will be adjusted as required. The horizontal and vertical alignment of Page Green Road will be adjusted along with its appurtenances (drainage, utilities, adjacent driveways, etc.) to improve sight distances and improve the operation of the roadway. The project will include the reconstruction of the existing "Y" intersection of Page Green Road and Lash Road. The project also includes Right-of-Way incidentals and acquisitions along the entire length of the roadway.
