

HARBOR CENTER

Buffalo, NY

Foit-Albert Survey completed the Boundary Survey and Easement mapping used for the conveyance for the \$172 million HARBORcenter in Buffalo, NY. The facility will feature two full-size NHL ice rinks, a full-service hotel, a two-story restaurant, street-level retail space and a five-level, 850-space parking structure.

Foit-Albert Survey also prepared the Topographic and Utility Survey to support the design team.

Additionally, Foit-Albert worked with Mortenson Construction to provide survey control and monitoring during construction, and Ferraro Pile and Shoring to provide layout and as-builts of the shoring, piles and pile caps.

Additional work included Laser Scanning (LiDAR) of buildings surrounding the construction site.
