

RIVERBEND COMMERCE PARK

Foit-Albert Associates is currently providing construction layout services for LP Ciminelli at the Riverbend Commerce Park's Solar City site in South Buffalo. The former Republic Steel brownfield site will be transformed into a twenty three acre, \$900 million solar panel factory - one of the largest solar modular production facilities in the world.

Foit-Albert Associates initial work at the site was to establish the horizontal and vertical control points to be used for layout for the duration of the construction at the site. Then, after researching records and vintage aerial photographs, we established the locations of the buried foundations of the former Republic Steel complex and staked the points on the ground.

Foit-Albert Associate's work at the site also includes the layout of soil borings and test pits, along with the layout of approximately 5,500 building piles. We are also assisting with the compiling of the pile drilling logs and the final asbuilt position of the piles relative to their design position both horizontally and vertically.
